1 Introduction

ABCD is an app for managing trial supplies from the vendors. The main features of the app are to manage incoming shipments, return shipments, kit destructions, or individual kit updates. The app provides the user with an interface which guides them efficiently through their process of managing inventory.

2 Platform

2.1 Browsers and operating systems

2.1.1 Microsoft Windows

ABCD runs in the Google Chrome browser under the Windows operating system.

2.1.2 Apple OS

ABCD runs in the Google Chrome browser under the Apple OS operating system.

3 General

3.1 Accessing ABCD

3.1.1 Logging in

Only users with an ABCD account can log in. Users log into ABCD with their username (email address) and password and can open ABCD from the XYZ plugin. Upon login, ABCD records the logging-in event for the user access log.

The access token issued to the user at login is shared across browser tabs.

The name of the logged-in user is displayed in the ABCD user interface.

3.1.2 Authorized users

Only authorized users can access ABCD and perform tasks in the system. Authorized users of ABCD have:

- a user account for the trial
- a role assigned in XYZ that determines the tasks they can carry out in the system
- a site assigned in XYZ

Unauthorized users are not able to log in.

3.1.3 Permissions

Users have access to ABCD features and can perform tasks in the application if the role they are assigned has the appropriate permissions.

ABCD administrators can create roles in XYZ for ABCD users so different users can perform different tasks.

ABCD only displays shipments for the site(s) to which the user has access.

3.1.4 Trials and sites

Users can only access sites they are associated with.

3.1.5 User sessions

User sessions are managed by XYZ.
If the user is inactive, their logged-in session expires once the timeout period defined in the trial configuration (set in XYZ) has elapsed. ABCD displays a warning message before the user is logged out of ABCD. When a user's session expires, they are required to re-authenticate with their username and password.

3.2 Data in ABCD

Data in ABCD is provided by the vendor and only the vendor and users with appropriate permissions can edit them.

3.3 Navigation and URLs

When a user navigates in ABCD, the URL in the address bar updates to reflect the user's current location.

3.4 Date and time formats

All dates in ABCD are displayed in DD MMM YYYY format.

All times in ABCD are displayed in the 24-hour format.

3.5 Training mode

ABCD supports a training mode, which enables users to complete their training before being able to access ABCD.

3.6 User assistance

Online help is available in ABCD system.

For security reasons, the rest of the content has been removed.
